

Draft change comparison: Example swap - fictional data

Valid requested change. Frozen baseline captured 2026-10-05. The request withdraws 0 players and moves 2 players. Reoptimization excludes withdrawn players, fixes requested swap placements and reruns the existing balance, friendship and coverage priorities using frozen ratings and rules. Fewer changes from the baseline are a final tie-breaker. No proposal is accepted by this preview.

Scenario balance-pass spread: 0.006; scenario tolerance ceiling: 0.106. The +0.10 tolerance is relative to this constrained scenario, so its ceiling may differ from the baseline. Time-limited feasible results are previews, not proof of optimality.

Detailed Balance: baseline, exact change, reoptimized

The same rating scale and team colours apply across columns. Each draft sorts assessed players by Overall Level, then places imputed players at the right. Slots do not identify the same child across columns. Dotted 1-5 guides indicate missing ratings, not observed ranges.
