Team Draft Methodology:

The goal of the draft is to arrive at a set of well-balanced teams that all coaches are happy with. To achieve this, we approach team selection as a *constrained optimization problem*, which we solve with Google's open-source OR-Tools. We enforce fixed/family coach assignments, practice day blackouts, and team sizes (at most one player difference between teams). A first pass minimizes the difference between team-averaged Overall Level ratings. We then run successive passes, allowing at most 0.10 additional rating points of team-to-team spread in Overall Level, to optimize friend requests, ball-handler balance, height, age, and the distribution of players with no matching evaluation record. Missing ratings in any assessment category, including Overall Level, are assigned a value of 3.

Player mix by team

Team	Top Shooters	Top Ball-Handlers	Tall Players*	Second Years	No assessment data	Overall Level estimated
Team 1	2	2 / 2	4 / 2	4 / 2	1	1
Team 2	3	2 / 2	3 / 2	6 / 2	1	2
Team 3	3	2 / 2	2 / 2	6 / 2	1	1
Team 4	4	2 / 2	4 / 2	5 / 2	1	1

Counts / goal: aim for 2 top ball-handlers, 2 tall players and 2 second-years per team. These are preferences, not guarantees.
* Tall Players combines the highest recorded height band (160-170 cm) and positive coach 'Tall' notes; each player counted once.
Top pools: 8 shooters; 8 ball-handlers, based on observed scores; cutoff ties included. Shooting is for discussion only.
No assessment data = no matching evaluation record. Overall Level estimated = no Overall Level score; replaced by 3, including blank records.
